

Speed and Agility **Enhancement** for a Major Cloud Migration

In an era where digital transformation is pivotal to staying competitive, many large enterprises face the daunting task of **modernizing** their data infrastructure. Our client, a captive finance company for a Fortune 50 automotive manufacturer, set out to **migrate** from multiple existing on-premise data systems to a robust cloud storage solution, but they faced some challenges when they began their journey.

Faced with the complexities of legacy systems, coordination between a wide variety of departments, and the need for seamless business continuity, they turned to Two Roads to help **enhance the speed and agility** with which they were able to get from strategy to mobilization. Two Roads was able to come in and quickly engage with the leadership team to **reorient the program** and set up the right structures for the journey ahead.

Our team plugged in during the planning phase to help create clear communication channels and governance so that information sharing, collaboration, and decision-making could be **more efficient** across a widely distributed program. We earned the trust of key leaders and were activated as project ambassadors to enable information flow across the various stakeholder groups, for **greater reach and efficiency**.

We also partnered with the client on the strategic **assessment, planning, and data preparation phases**. Working closely with the internal program teams, we evaluated legacy systems, data architecture, and dependencies, identifying potential risks and resource

requirements to identify areas for **optimization**. By aligning the team on the program structure, our client was able to implement a **streamlined program management process** and improve vendor and financial management disciplines.

This resulted in increased team productivity, effective financial governance, better visibility of key business insights, and more timely resolution of issues. The comprehensive roadmap from this work helped provide **a clear path forward** for the future.

By addressing these foundational steps, the client was able to **mitigate risk, minimize downtime**, and deliver a **seamless transition** to the cloud. This strategic approach not only facilitated a smoother migration process but also provided a blueprint for the client's future data management initiatives. The program was **so effective** that the client leveraged the playbook as a prototype for other technology programs and initiatives within the Data & Analytics team.

Data & Insights

Technology Modernization

Operating Model Optimization

The Outcome

CROSS-FUNCTIONAL TEAM ALIGNMENT & ENABLEMENT

Partnered with leadership to clarify the right set of goals, governance, and communication model to set them up for success in implementation.

ENHANCED DATA QUALITY & INTEGRITY

Ensured foundation of data included only accurate and complete data.

IMPROVED REPORTING & TRACKING

Developed and implemented reporting tools to effectively track and forecast resource utilization across workstreams.

RESOURCE OPTIMIZATION

Higher output due to optimized processes and workflow efficiency.
